Instructions

⌃ COLLAPSE ⌃

Visit w3schools and go to the Java Tutorial section: https://my-learning.w3schools.com/tutorial/java
Complete the following readings
      Strings Lessons 5.1 - 5.4
      Methods Lessons 10.1-10.5
      Classes Lessons 11.1 - 11.6, 11.15, 11.21
      File Handling Lessons 12.1 - 12.4

Guide:

Make sure you're in the main branch locally and `git pull origin main` any pending changes
Make a new branch per the recommended branch name below (git checkout -b ...)
Fill in the items in the worksheet below (save as often as necessary)
Once finished, export the worksheet
Add the output file to any location of your choice in your repository folder (i.e., a Module2 folder)
Check that git sees it via `git status`
If everything is good, continue to submit
      Track the file(s) via `git add`
      Commit the changes via `git commit` (don't forget the commit message)
      Push the changes to GitHub via `git push` (don't forget to refer to the proper branch)
      Create a pull request from the homework related branch to main (i.e., main <- "homework branch")
      Open and complete the merge of the pull request (it should turn purple)
      Locally checkout main and pull the latest changes (to prepare for future work)
Take the same output file and upload it to Canvas
      *This step is new since GitHub renders the PDF as an image the links aren't clickable so this method works better
   *Remember, the github process of these files are encouragement for your tracking of your progress

Reflection (2 pts.)

Task #1 - Points: 1

Text: Reflect on the topics and refer to the checklist of this task

Checklist

*The checkboxes are for your own tracking

#	Points	Details
#1	1	Mention specifics of what concepts/topics were totally new to you.
#2	1	Mention specifics of what concepts/topics you already knew.
#3	1	Mention specifics of any topics you still don't feel confident about. If everything makes sense so far you can mention so.
#4	1	At least a few reasonable sentences.

Response:

Every topic that was introduced here was new to me because I don't remember much from my previous Java class. The topics were methods, classes, file handling, and strings. Methods helped me organize my code better, so I could use the same piece of code without writing it again. Classes were interesting because they let me group related things together, which made my programs easier to understand. File handling was about reading and writing files, which was useful for saving data. Strings were everywhere, and I learned how to work with text. Each of these topics made coding in Java more understandable and practical for me.
